

**AMENDMENTS TO THE SPECIFICATION:**

Please amend the paragraph beginning at page 2, line 17 as follows:

In other examples, the computer program product has one or more of the following features. An agent, ~~(e.g. e.g.,~~ employing JAVA™ (“Java”) and JAVA™ Script (“JavaScript”) code, code) can be provided for detecting an event at the second computing device. The product can identify a severity level for event detection at the first computing device, and detect an event having the identified severity level. The product can also identify a severity level for event detection at the second computing device, and detect an event having the identified severity level. The severity levels indicate whether the trace outputs include an error message, a warning message, an information message, or a debug message. The second trace output can be integrated with the first trace output in a chronological order. An active component trace output can be sent from the second computing device to the first computing device for integration with the first trace output. The integrated trace output can be displayed on the second computing device in a separate browser window.
